

Common clownfish (*Amphiprion ocellaris*)

- The common clownfish was the inspiration behind the Walt Disney film 'Finding Nemo'.
- Clownfish are the only fish known to be able to live among the tentacles of anemones.

- All clownfish begin life as males, and only the largest ones may become female in later life.

- A female clownfish can lay up to 1,000 eggs, and these are cared for by the male and female until they hatch.
